Due to the progressive obliteration of the Desert, the municipal authorities decided to implement a restoration program of a Desert area. For this purpose, in October 2010, the municipality of Klucze has requested to the European Commission for funding from the LIFE + project *Active conservation of priority sand habitats complex (6120, 2330) in the Natura 2000 site „Błędowska Desert* ”.

After several months of careful evaluation of the European Commission's proposal was positively evaluated. As a result project was in the list of projects slated for funding from the LIFE +. More details about the project can be found [here](#).
